

OPTP AXIS™ Roller Series

OPTP was the first to introduce a firm long lasting foam roller. Made of heat-molded foam beads, this smooth surface foam roller lasts considerably longer than the traditional polyethylene rollers. The exclusive OPTP AXIS roller will not lose shape after moderate to heavy use.

OPTP is proud to introduce the NEW Standard Density White AXIS Roller. The White AXIS Roller has the feel of the traditional polyethylene foam roller but with the long-lasting durability of the original Black AXIS Roller. Available in two styles: the original firm black AXIS roller and the new standard White AXIS Roller. Both styles come in a variety of sizes.

OPTP White AXIS™ Rollers (Standard Density)
