Translatory Spinal Manipulation for Physical Therapists

This book with companion DVD provides teachers and students with a well illustrated and detailed explanation of translatory spinal manipulation (TSM™). TSM is a system of techniques emphasizing the use of small amplitude, straight line traction and gliding impulses. These high and low velocity spinal manipulative techniques were developed by Evjenth and Kaltenborn and are suitable for entry level practitioners.

From John Krauss, PT, Olaf Evjenth, PT and Doug Creighton, PT. Illustrated. Softcover, 133 pages. Non-returnable.
